Determination of asset allocation:

A mix of quantitative and qualitative factors will be used to determine equity asset allocation. Quantitative parameter: This will be determined based on the month-end weighted average P/E ratio and P/B ratio of the Nifty 500 Index, combined in the weightage of 50:50 ratio. As per the ratio bands, the corresponding equity allocation will be identified for both P/E and P/B. These allocations will be accorded 50% weightage each and added to arrive at the final equity allocation based on quantitative parameters for the month.

Price to Equity band-based allocation:

If weighted average PE ratio of Nifty 500 Index falls in this band...	...the equity component will be... (%)	...and the debt component will be ... (%)
Upto 12	80-85	15-20
12 - 16	67.5-80	20-32.5
16 - 20	55-67.5	32.5-45
20 - 24	42.5-55	45-57.5
24 - 28	30-42.5	57.5-70
Above 28	20-30	70-80

Price to Book Value band-based allocation:

If weighted average PB ratio of the Nifty 500 Index falls in this band...	...the equity component will be... (%)	...and the debt component will be ... (%)
Upto 2	80-85	15-20
2 - 3	63-80	20-37
3 - 4	47-63	37-53
4 - 5	30-47	53-70
Above 5	20-30	70-80

The Trustee reserves the right to change the P/E ratio and P/B ratio bands or use any other criteria for determining the equity/debt allocation if the Nifty 500 Index is either suspended or becomes irrelevant, subject to prior approval of SEBI.

Calculation of P/E and P/B ratios:

The Price to Earnings Ratio (P/E ratio) and Price to Book Value Ratio (P/B ratio) for Nifty 500 Index will be obtained from renowned sources such as Bloomberg or a reputed agency such as NSE Indices Limited (Formerly known as India Index Services & Products Limited - IISL) or an internationally recognized brokerage house, computed using well accepted methods. Data from the most recent reporting period (quarterly/ semi-annual/ annual) will be used in the calculation. In exceptional circumstances and for reasons recorded in writing, the AMC/Trustee reserves the right to recalculate or make necessary adjustments to P/E and P/B ratio provided by external vendors.

Qualitative parameters: After determination of quantitative parameter-based equity allocation, fund manager will apply his/her qualitative analysis by incorporating factors such as macro trends, interest rates, risk environment etc. Dynamic asset allocation views will be driven by research input derived from a combination of some or all of the following:

economic regime models,

- aggregate corporate fundamentals and
- valuation models,
- market liquidity models and
- analyst assessments of policy backdrops.

Fund manager can decide allocation to equity component which may be +/- 15% from the band specified in the table above subject to overall asset allocation limits for each asset class. The portfolio will be realigned at least once a month, generally in the first week of the following month.

Illustration of Asset allocation using P/E and P/B bands:

If Nifty 500 Index weighted average P/E as on 30th April stands at 28x, the corresponding equity allocation as per the band will be, say, 30%.

If Nifty 500 Index weighted average P/B as on 30th April stands at 2.7x, the corresponding equity allocation as per the band will be, say, 72%.

50% weight will be applied to 30% (P/E based allocation) and 50% weight to 72% (P/B based allocation) to arrive at a combined weighted average equity allocation of 51%. Debt allocation will constitute the balance of 49%.

The equity allocation level of 51% thus obtained from quantitative model is further subject to modification by the fund manager to the extent of +/- 15% based on his/ her qualitative analysis. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially (subject to and within the maximum limits prescribed above) depending upon the perception of the Investment Manager, the intention being at all times to seek to protect the interests of the Unit holders. The asset allocation pattern described above may alter from time to time on a short-term basis on defensive considerations (As per Para 1.14.1.2.b of SEBI Master circular on Mutual Funds dated June 27, 2024), keeping in view market conditions, market opportunities, applicable regulations and political and economic factors (i.e., for reasons other than downgrade in rating) and would, in such cases, shall be rebalanced within 30 calendar days from date of deviation. However, if the asset allocation pattern is to be altered for other reasons, as this is a fundamental attribute, the procedure outlined in the paragraph on fundamental attributes below, shall be followed.

Portfolio Rebalancing

In the event of deviations the portfolio will be rebalanced as per Para 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024. In the event of deviation from mandated asset allocation mentioned in the Scheme Information Document (SID) due to passive breaches (occurrence of instances not arising out of omission and commission of AMCs), rebalancing period shall be 30 Business Days. Where the portfolio is not rebalanced within 30 Business Days justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment committee shall then decide on the course of action. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period. However, at all times the portfolio will adhere to the overall investment objectives of the Scheme.

All the reporting and disclosure requirements as mentioned in Para 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024 shall be complied with. This includes disclosure to investors in case the AUM of deviated portfolio is more than 10% of the AUM of main portfolio of scheme.

TEMPORARY INVESTMENTS: When the Fund Managers believes market or economic conditions are unfavourable for investors, the scheme may invest up to 100% of the Fund's assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include commercial paper, bank obligations, repurchase agreements and other approved money market instruments, including Mibor/call linked instruments, fixed deposits of banks etc. The manager also may invest in these types of securities or hold cash while looking for suitable investment opportunities or to maintain liquidity. In these circumstances, the Fund may be unable to achieve its investment goal. As per Para 1.14.1.2.b of SEBI Master circular on Mutual Funds dated June 27, 2024 such changes in the investment pattern will be for short term and for defensive considerations only and shall be rebalanced within 30 calendar days from date of deviation.

B. WHERE WILL THE SCHEME INVEST?

Subject to the SEBI Regulations, the Scheme may invest in various types of instruments including, but not limited to, any of the following:

- (a) Units of Domestic Mutual Fund Scheme(s)
- (b) Domestic Commercial Paper (CP), Certificate of Deposits (CD), Bills Rediscounting, TREPs, Reverse Repo, and other Money Market Instruments as may be permitted by SEBI / RBI from time to time to meet the liquidity requirements for the purposes of redemptions.
- (c) Deposits with domestic banks and other bodies corporate as may be permitted by SEBI from time to time, pending deployment of funds

C. WHAT ARE THE INVESTMENT STRATEGIES?

The scheme endeavours to provide long term capital appreciation and income from a mix of investments in equity and debt funds. The scheme will dynamically allocate its assets between equity and debt funds based on a combination of qualitative and quantitative parameters.

The portfolio will be realigned at least once a month, generally in the first week of the following month.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Mutual Fund has identified the following as the benchmark for the scheme:

Benchmark	Justification
CRISIL Hybrid 50+50 - Moderate Index	The index is designed to provide 50% exposure to BSE 200 TRI and 50% exposure to Crisil Composite Bond Fund index. The fund would follow a dynamic asset allocation strategy with the equity asset class exposure being actively managed. Benchmark index for this dynamic allocation strategy should have exposure to both equity and fixed income components. CRISIL Hybrid 50+50 index provides exposure to both asset classes in equal ratio, and thus works out to be a suitable index for the fund.

The AMC / Trustee reserves the right to change / modify the benchmark by issuing an addendum.

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) is the value of a Unit and is computed as shown below:

NAV = (Rs. Per unit)	Market Value of the scheme's investments + other assets (including accrued interest) - all liabilities except unit capital & reserves
	Number of units outstanding at the end of the day

For example, if the market value of securities of a mutual fund scheme is INR 200 lakh and the mutual fund has issued 10 lakh units of INR 10 each to the investors, then the NAV per unit of the fund is INR 20 (i.e. 200 lakh/10 lakh).

The NAV will be normally computed for all Business Days of the Scheme and will be calculated to four decimals using standard rounding criteria.

While determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 95 per cent of the Net Asset Value.

B. NEW FUND OFFER (NFO) EXPENSES

Not applicable.

Illustration for Franklin India Dynamic Asset Allocation Fund of Funds:

Initial purchase on March 1, 2020- 10,000 units

Additional purchase on March 15, 2020- 5,000 units

The scheme has exit load if redeemed before 1 year.

Maximum redemption permitted without exit load for each purchase transaction: 10% of the units purchased

Load applicability under various scenarios

Exit load is applied for each purchase transaction separately and no clubbing of transactions will be allowed for computing the maximum load free exit allowed for the

respective scheme. Since FIFO method for processing the redemption request is applicable, load free exit for the purchases made subsequent to the initial purchase will be available only after the investor redeems all units purchased by him in the initial purchase.

Accordingly, if the investor redeems the below units on or before February 28, 2021, exit load will be applicable as follows:

Number of units redeemed (including previous redemptions, if any)	Load payable on exit	Remarks
Upto 1000 units	Nil	No exit load is applicable, if the number of units redeemed are up to the limit of 10% of initial purchase made on March 1, 2020
1500 units	Exit load of 1% will be charged on the NAV for redeeming 500 units	Exit load will be applicable for redemption made over and above the limit of 10% of the initial purchase made on March 1, 2020. Since the Scheme follows FIFO method for redemption, investor will have to redeem the entire units purchased on March 1, 2020 before claiming load free redemption of 500 units from the Additional units purchased on March 15, 2020.
10000 units	Exit load of 1% will be charged on the NAV for redeeming 9000 units	
15000 units	Exit load of 1% will be charged on the NAV for redeeming 13500 units	1000 units from the initial purchase made on March 1, 2020 and 500 units from additional purchase made on March 15, 2020 will be redeemed without exit load. Exit load will be applicable for the redemption of the balance 13500 units.

All prior investments continue to be subject to the load structure applicable at the time of the respective investment.

For investments under 'Direct' plan, the Exit load applicable shall be the same as the exit load applicable in the respective Scheme/Scheme Portfolio.

The applicability of exit load in respect of switches between plans and options within the same Scheme will be as follows:

Nature of investment	Exit Load applicability
Existing and new investments made under a Distributor code	No load will be charged on switches to Direct Plan
Existing and new investments made without a Distributor code	No load will be charged on switches to Direct.
Investment made under Direct route on or after January 01, 2013	No load will be charged on switches from Direct to other plans and options under

Nature of investment	Exit Load applicability
	the Scheme available for investment under a Distributor code.

For determining whether an investment was made under a Distributor code or not, the Distributor code as per the records of the AMC/Registrar on the date of the switch transaction will be considered.

As per Para 10.4.1.a of SEBI Master Circular on Mutual Funds dated June 27, 2024 no entry load will be charged for purchase/additional purchase/switches accepted by the Mutual Fund. Similarly, no entry load will be charged with respect to all applications for registrations under the Systematic Investment Plan (SIP)/Systematic Transfer Plan (STP) accepted by the Mutual Fund including SIPs registered prior to August 1, 2009.

The upfront commission on investment made by the investor, if any, shall be paid to the ARN Holder (AMFI registered distributor) directly by the investor, based on the investor's assessment of various factors including service rendered by the ARN Holder. All the switches / exchanges will be treated as redemption in the source scheme and subscription in the destination scheme, with the entry and exit load as may be applicable.

The AMC/Trustee reserves the right to modify the Load/Fee mentioned above at any time in future on a prospective basis, subject to the limits prescribed under the SEBI Regulations.

For the information of the investors, any introduction / change of load in the Scheme may be put up on the website of the Mutual Fund. The addendum detailing the changes may be circulated among the Investor Service Centres / Distributors / Brokers under directions to display it at their respective offices in form of a Notice and attach it to the copies of Scheme Information Documents and Key Information Memorandum (if required) already in stock. The load may also be disclosed in the account statement issued after the introduction of such load.

The investor is requested to check the prevailing load structure of the scheme before investing.

All loads collected on units shall be retained in the Fund and maintained in a separate account and would strictly and fully be utilised by the Investment Manager in providing distribution related services to the Mutual Fund relating to the sale, promotion, advertising and marketing of Units of the Scheme, including payments to brokers / registrars for their services in connection with the distribution of the Units. Any surplus in this account may be credited to the scheme, whenever felt appropriate by the AMC. As per Para 10.4.1.a of SEBI Master Circular on Mutual Funds dated June 27, 2024, effective August 01, 2009, of the exit load or CDSC charged to the investor, a maximum of 1% of the redemption proceeds shall be maintained in a separate account which can be used by the AMC to pay commissions to the distributor and to take care of other marketing and selling expenses. Any balance shall be credited to the scheme immediately.

Credit of exit load to schemes:

Effective October 01, 2012, exit load (if any) charged to the unit holders by the Mutual Fund on redemption (including switch-out) of units shall be credited to the respective scheme net of Goods and service tax. Goods and Service tax on exit load, if any, shall be paid out of the exit load proceeds.

Load on bonus/Reinvestment of Income Distribution cum capital withdrawal option units: As per Para 10.6 of SEBI Master Circular on Mutual Funds dated June 27, 2024, no entry and exit load shall be charged on bonus units or units allotted on reinvestment of IDCW.

Trail Fees: In the FOF scheme, the underlying schemes get the subscription through the vehicle of FOF. Hence, the distributor who mobilises the investment in Franklin Templeton FOF is entitled to trail fees, which the underlying scheme would have normally paid to a distributor. Accordingly, the trail fees will be paid out of the FOF scheme.

The Trustees/AMC reserves the right to alter the above mechanism at any time in future on a prospective basis.

B. Risk Factors

SCHEME SPECIFIC RISK FACTORS

1. The performance of the scheme may be affected by the corporate performance, macro-economic factors, change in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets.
2. The Trustee at its sole discretion reserves the right to limit or withdraw sale and/or repurchase/redemption and/or switching of the units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely under certain circumstances. For details refer the Section ‘**Suspension of sale of units**’ and ‘**Suspension of redemption of units**’. The scheme will retain certain investments in cash or cash equivalent for the day to day liquidity requirements.
3. The scheme will invest primarily in a combination of Franklin Templeton India’s equity and income (debt) schemes. Hence, movements in the Net Asset Value (NAV) of the underlying schemes may impact the performance of FIDAAF. Any change in the investment policies or fundamental attributes of the underlying schemes will affect the performance of FIDAAF.
4. Any change in the ability to purchase/redeem units in the underlying scheme on account of suspension of sale of units, suspension of redemption of units, segregation of portfolio, winding up, etc may affect FIDAAF’s ability to invest and liquidate funds.
5. At the peak of a bull market, a portfolio balanced on PE & PB ratios may not outperform a fully invested portfolio.
6. Investments in income schemes will have all the risks associated with the income scheme including interest risk, reinvestment risk, credit risk, market risk, liquidity risk etc.
7. Investments in equity schemes will have all the risks associated with the equity schemes including liquidity risk.
8. To the extent the underlying debt and equity schemes invest in overseas financial assets, there may be risk associated with currency movements, restriction on repatriation,

- transaction procedures in overseas markets as well as country related risk.
9. To the extent the underlying debt and equity schemes engage in security lending, FIDAAF will be subject to risks related to fluctuations in collateral value/settlement, liquidity and counter party related risk.
 10. To the extent the underlying debt and equity schemes engage in short selling, FIDAAF will be subject to risks related to fluctuations in market price, settlement and liquidity risks.
 11. To the extent the underlying debt and equity schemes invest in derivative instruments, FIDAAF is exposed to the high risk, high return derivative instruments.
 12. The investors may refer to the Scheme Information Documents and the related Addenda of the Underlying Funds for the Scheme Specific Risk Factors and Special Considerations of the respective schemes.
 13. The Investors shall bear the recurring expenses of the Scheme in addition to the expenses (recurring expenses and load) of the underlying schemes. The load and the recurring expenses charged by the underlying fund may change from time to time. Therefore, the returns of the Scheme may be materially impacted or may, at times, be lower than the returns that the investors directly investing in the underlying fund could obtain.

Liquidity Risk

14. Risk will be monitored in terms of the number of days it takes to liquidate the Units of the underlying schemes in the portfolio. Efforts would be made to keep the average liquidation period under prudent limits prescribed internally.

15. Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the AMC has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

16. Risk factors associated with investment in Tri-Party Repo

All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by Clearing Corporation of India (CCIL). This reduces the settlement and counterparty risks considerably.

Mutual funds are member of securities segment and Triparty Repo trade settlement of CCIL. The members are required to contribute an amount from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from

the default fund contributions of the non-defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. Additionally, the fund contribution is allowed to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL maintains two separate Default Funds with respect to the Securities Segment. One with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades.

Therefore, mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

RISK MITIGATION FACTORS

As the scheme invests in mutual fund schemes, there are no specific risk mitigating factors.

Background

Investors have been cautious about investing in equities to a large extent due to its inherent volatility. Moreover, in the face of volatile markets, equity investors have expressed a view that fund managers should reduce the equity component of the schemes when the markets are at a peak so that the value of investors' money is protected when the markets come down. Similarly, in bearish markets, the schemes should be fully invested in equities so that they can benefit from the appreciation in equity values that follows such a market.

However, the mandate for all of our equity funds is to stay invested in equities through all market conditions. Hence, no matter how good the stock picking skills of the fund managers, a sharp fall in the markets can result in severe erosion in the value of investor's money.

To overcome this problem, Franklin India Dynamic Asset Allocation Fund of Funds is designed with a built-in mandate to change the asset allocation in line with market conditions.

What is Franklin India Dynamic Asset Allocation Fund of Funds?

Franklin India Dynamic Asset Allocation Fund of Funds is an open-end fund of funds with an in-built buy-sell mechanism that is triggered by the PE & PB levels of the Nifty 500 Index. The scheme will automatically balance its asset allocation every month based on the weighted average P/E and P/B ratios of the Nifty 500 Index.

Price to Earnings Ratio (PE ratio) is the ratio of the stock price of a company to its earnings per share. For e.g., a company with a stock price of Rs.60 and earnings per share of Rs.3 has a PE ratio of 20. The PE ratio is an indicator of how the market views a company. The PE ratio of an index is the weighted average PE ratio of all the constituent stocks.

Price to Book Ratio (P/B ratio) is a measure of company's market price in relation to its book value. The ratio denotes how much equity investors are paying for each rupee in net assets. The PB ratio of an index is the weighted average PB ratio of all the constituent stocks. Book value, usually located on a company's balance sheet as "stockholder equity," represents the total amount that would be left over if the company liquidated all its assets and repaid all its liabilities. For e.g., A company has INR 100 million in assets on the balance sheet and INR 75 million in liabilities. The book value of that company would be calculated simply as INR 25 million (INR100M – INR 75M). If there are 10 million shares outstanding, each share would represent INR 2.50 of book value. If each share sells on the market at INR 5, then the P/B ratio would be 2x ($5 \div 2.50$). This illustrates that the market price is valued at twice its book value.

How does the scheme work?

The scheme will change its asset allocation based on the PE & PB ratio band. At higher PE & PB ratios, it will reduce allocation to equities in order to minimise downside risk. Similarly, at lower PE & PB ratios, it will increase allocation to equities to capitalise on their upside potential. Historically, such a strategy of varying the allocation of equity and debt/money market instruments based on the PE & PB ratio level has delivered superior risk-adjusted returns over the long term as explained below, although there is no guarantee that this past performance will be repeated in the future.

What are the benefits of such a strategy?

- Since the fund will sell out when the markets are high and buy when the markets are low, investors will see less volatility in their asset values.
- There is an inherent buy - sell discipline that ensures there is less room for subjectivity or error of judgement.

Investment objective

To generate income through investments in a range of debt and money market instruments while maintaining the optimum balance of yield, safety and liquidity. However, there can be no assurance or guarantee that the investment objective of the Scheme would be achieved.

Benchmark Index: Nifty Short Term Debt Index B-II

Investment Strategy

The scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. An appropriate mix of debt market securities and money market securities will be used to achieve this. Money Market securities include cash and cash equivalents. The scheme will invest in Debt & Money Market securities such that the Macaulay duration of the portfolio is between 1 year and 3 years.

The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management team of the AMC. The credit

evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer term financial health of the issuer.

The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies. In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same. Further, the Scheme may invest in other schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity with the prevailing Regulations.

As per the Regulations, no investment management fees will be charged for such investments. The Scheme may use derivative instruments like Interest Rate Swaps, Interest Rate Futures, Forward Rate Agreements or other derivative instruments for the purpose of hedging, portfolio balancing and other purposes, as permitted under the Regulations.

Hedging using Interest Rate Futures could be perfect or imperfect, subject to applicable regulations. Usage of derivatives may expose the Scheme to certain risks inherent to such derivatives. It may also invest in securitized debt.

For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so with the prior approval of the Board of the AMC/Trustees.

The Scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.
