C. WHAT ARE THE INVESTMENT STRATEGIES?

Franklin India Feeder - Templeton European Opportunities Fund is an open-end passively managed fund investing predominantly in units of Templeton European Opportunities Fund, an overseas equity fund which primarily invest in securities of issuers incorporated or having their principal business activities in European countries.

Mutual Fund schemes can be of two types viz. actively managed and passively managed. An actively managed scheme would try and beat the returns generated by a given market by employing sophisticated research tools, actively trading a portfolio etc. All these translate to higher cost of managing the fund - but do not necessarily guarantee out performance - especially over the long term. On the other hand, a passively managed scheme like this master feeder fund would invest in the overseas mutual funds / unit trusts within the investment pattern allowing Indian investor to diversify his / her risk from a single country and single currency investment. The investment made in the underlying fund will be based on the subscriptions and redemptions received in the Scheme and within the overall limits specified by SEBI/RBI.

The Scheme currently proposes to invest in units of Templeton European Opportunities Fund, an international Franklin Templeton SICAV range mutual fund (domiciled in Luxembourg) that invests in securities of issuers incorporated or having their principal business activities in European countries.

The benchmark used for Templeton European Opportunities Fund is MSCI Europe Index, which will be followed for FIF-TEOF also after converting it Indian Rupee.

The FIF-TEOF may not be able to mirror the performance of underlying overseas fund due to various reasons such as currency difference between FIF-TEOF and underlying fund, daily revaluation of foreign exchange in FIF-TEOF for the portfolio valuation, entire assets of FIF-TEOF may not be invested in underlying fund, the amount payable/receivable on settlement date would be different as compared to the amount payable/receivable on the trade confirmation date of the investment in the FIF-TEOF / underlying fund due to foreign exchange

movement, difference in the date of allotment of units in FIF-TEOF and the investment by FIF-TEOF into the underlying fund etc.

For local (domestic) investments

The main aim of the investment process is to meet Fund specific investment objectives and to develop a well-diversified, high credit portfolio that minimises liquidity risk and credit risk. The performance review includes portfolio holding, peer group review, policy deviation, performance vis-à-vis peers and benchmark indices etc. The Investment process is intensely research oriented. It comprises of qualitative as well as quantitative measures.

The fund manager shall have the option to enter into forward contracts for the purposes of hedging against the foreign exchange fluctuations.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Mutual Fund has identified the following as the benchmark for the scheme:

Benchmark	Justification
MSCI Europe Index	The fund proposes to invest in units of Templeton European Opportunities Fund. The benchmark used for Templeton European Opportunities Fund is MSCI Europe Index. Hence, the same will be followed for FIF-TEOF also after converting it in Indian Rupee. The MSCI Europe Index captures large and mid-cap representations across 15 Developed Markets (DM) countries in the Europe. DM countries in Europe include: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the UK. The MSCI Europe Index was launched on Dec 31, 1969. With 432 constituents, the index covers approximately 85% of the free float-adjusted market capitalization across the European Developed Markets equity universe. The index is based on the MSCI Global Investable Market Indices (GIMI) Methodology - a comprehensive and consistent approach to index construction that allows for meaningful global views and cross regional comparisons across all market capitalization size, sector and style segments and combinations. This methodology aims to provide exhaustive coverage of the relevant investment opportunity set with a strong emphasis on index liquidity, investability and replicability. The index is reviewed quarterly—in February, May, August and November—with the objective of reflecting change in the underlying equity markets in a timely manner, while limiting undue index turnover. During the May and November semi-annual index reviews, the index is rebalanced and the large and mid-capitalization cut-off points are recalculated.

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) is the value of a Unit and is computed as shown below:

NAV =	Market Value of the scheme's investments + other assets (including accrued
(Rs. Per	interest) - all liabilities except unit capital & reserves
unit)	Number of units outstanding at the end of the day

For example, if the market value of securities of a mutual fund scheme is INR 200 lakh and the mutual fund has issued 10 lakh units of INR 10 each to the investors, then the NAV per unit of the fund is INR 20 (i.e.200 lakh/10 lakh).

The NAV will be normally computed for all Business Days of the Scheme and will be calculated to four decimals using standard rounding criteria.

The valuation of the investment in the Units of the underlying fund will be based on the NAV of the underlying fund on the date of the valuation converted into Indian Rupees.

Since this Scheme invests predominantly in overseas mutual funds / units trusts, the NAV of the Scheme will be based on the NAV of the underlying fund. Since the NAV of the underlying fund would normally be declared on the next business day, the Scheme will declare the NAV of the day on the next Business Day, based on the NAV of the underlying fund.

Valuation of the scheme's assets, calculation of the scheme's NAV and the accounting policies & standards will be subject to such norms and guidelines that SEBI may prescribe from time to time and shall be subject to audit on an annual basis.

Valuation of Foreign Exchange Conversion: On the valuation day, all the assets and liabilities in foreign currency will be valued in Indian Rupees on the basis of Foreign Exchange rate quoted on Bloomberg/Reuters around India markets close time (which is currently around 3:30 p.m. IST) or at the RBI Reference rate as at the close of the Banking hours on that day in India. The Trustees/AMC reserves the right to change the source for determining the exchange rate. The reasons for the change in the source for determining the exchange rate will be recorded in writing. The Rupee value of Investments valued in the manner described above and other assets and liabilities represented in foreign currency shall be obtained by multiplying the aforesaid rate

While determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 95 per cent of the Net Asset Value.

B. NEW FUND OFFER (NFO) EXPENSES

Not applicable.

B. Risk Factors

SCHEME SPECIFIC RISK FACTORS

- 1. The scheme proposes to invest primarily in units of an overseas mutual fund(s). Hence, movements in the Net Asset Value (NAV) of the underlying overseas fund(s) would impact the performance of the scheme.
- 2. Any change in the investment policies or fundamental attributes of the underlying fund will affect the performance of the scheme.
- 3. Any change in the ability to purchase/redeem units in the underlying scheme on account of suspension of sale of units, suspension of redemption of units, segregation of portfolio, winding up, etc may affect FIF-FUSOF's ability to invest and liquidate funds.
- 4. The performance of the scheme may be affected by the corporate performance, macroeconomic factors, changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in the securities markets.
- 5. The scheme may not be able to mirror the performance of underlying overseas fund(s) due to various reasons such as currency difference between the scheme and the underlying overseas mutual funds, daily revaluation of foreign exchange in the scheme for the portfolio valuation, entire assets of the scheme may not be invested in underlying overseas mutual fund, the amount payable/receivable on settlement date would be different as compared to the amount payable/receivable on the trade confirmation date of the investment in the scheme / underlying overseas mutual fund due to foreign exchange movement, difference in the date of allotment of units in the scheme and the investment by the scheme into the underlying overseas mutual fund, etc.
- 6. The Trustee at its sole discretion reserves the right to withdraw sale and/or repurchase/

redemption or switching of the Units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely. For details refer the Section **Suspension of sale of units'** and **'Suspension of redemption of units'**.

7. The Investors shall bear the recurring expenses of the scheme in addition to the expenses (recurring expenses and load) of the underlying fund. The load and the recurring expenses charged by the underlying fund may change from time to time. Therefore, the returns of the Scheme may be materially impacted or may, at times, be lower than the returns that the investors directly investing in the underlying fund could obtain.

Risks associated with underlying fund

8. Being a feeder fund, investments in the scheme will have all the risks associated with the underlying fund, which are briefly summarised as follows:

Market risk – This is a general risk which affects all types of investment.

Equity risks: The value of the Fund will be affected by economic, political, market, and issuer specific changes. Such changes may adversely affect securities, regardless of company specific performance. Additionally, different industries, financial markets, and securities can react differently to these changes. Such fluctuations of the Fund's value are often exacerbated in the short term as well. The risk that one or more companies in the Fund's portfolio will fall, or fail to rise, can adversely affect the overall portfolio performance in any given period.

Growth stock risk: Funds investing in growth stocks can be more volatile and may react differently to economic, political, market, and issuer specific developments that the overall market. Historically, the prices of growth stocks have been more volatile than other securities, especially, over short term periods of time. Growth stocks may also be more expensive, relative to their earnings than the market in general. As such, growth stocks can experience greater volatility in reaction to changes in earnings growth.

Small and mid-sized companies risks: The stock prices of small and mid-sized companies can perform differently than larger, more recognised, companies and have the potential to be more volatile. A lower degree of liquidity in their securities, a greater sensitivity to changes in economic conditions and interest rates, and uncertainty over future growth prospects may all contribute to such increased price volatility. Additionally, smaller companies may be unable to generate new funds for growth and development, may lack depth in management, and may be developing products in new and uncertain markets all of which are risks to consider when investing in such companies.

Liquidity risk – Reduced liquidity may have an adverse impact on the market price and the scheme's ability to sell particular securities.

Counterparty risk - it refers to the risk that the counterparty will fail to respect its commitment.

Risks associated with overseas investment

9. To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances as well as the application to it of other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic

- deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.
- 10. **Currency Risk:** The scheme will invest in overseas mutual fund / foreign securities as permitted by the concerned regulatory authorities in India. Since the assets will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes/fluctuations in the value of the foreign currencies relative to the Indian Rupee.
- 11. **Country Risk:** The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests.
- 12. Currency Hedging risk: The scheme may engage in permitted currency hedging transactions with an intention to reduce exchange rate fluctuations between the currency of the Scheme (Indian Rupee) and the base currency of the underlying overseas mutual fund(s). The hedging strategy employed will seek to reduce as far as possible the currency exposure of the scheme(s) and no assurance can be given that the hedging objective will be achieved. The hedging strategy may substantially limit Unitholders from benefiting if the scheme's currency falls against the reference currency(ies). Additionally, Unitholders may be exposed to fluctuations in the NAV reflecting the gains/losses on and the costs of the relevant financial instruments.
- 13. **Liquidity Risk** Risk will be monitored in terms of the number of days it takes to liquidate the Units of the underlying overseas mutual fund(s) in the portfolio. Efforts would be made to keep the average liquidation period under prudent limits prescribed internally.

Risks associated with debt investment

To the extent the scheme and underlying overseas mutual fund makes investment in debt & money market instruments, the scheme will have exposure to all the risks of a debt scheme, such as:

- 14. Investments in debt instruments are subject to credit risk / default risk and interest rate risk. Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Default risk / credit risk arises due to an issuer's inability to meet obligations on the principal repayment and interest payments. Normally the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. Interest rate risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the scheme may be subject to fluctuation. Changes in the interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The floating rate investments are subject to risks pertaining to Interest rate movement, Spread Movement, Settlement and Liquidity.
- 15. Reinvestment risk: This risk refers to the interest rate levels at which cash flows received for the securities in the Scheme is reinvested. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate.

- 16. Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.
- 17. Different types of securities in which the scheme would invest carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- 18. The scheme may invest in non-publicly offered debt securities, which could affect the liquidity of the scheme.
- 19. Money market securities, while fairly liquid, may lack a well-developed secondary market, which may restrict the selling ability of the scheme.

Risks associated with equity investment

To the extent the underlying overseas fund invests in equity instruments, the scheme will be exposed to all the risks of an equity scheme, such as:

- 20. Low trading volumes, settlement periods and transfer procedures may restrict the liquidity of the scheme's investments. Transacting may become difficult due to extreme volatility in the market resulting in constriction in volumes. Additionally, regulatory changes may have an adverse impact on the liquidity of the scheme. Different financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an inordinately large number of redemption requests.
- 21. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments may be limited by overall trading volumes of the stock exchanges. Different segments of the different financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of the settlements may affect the scheme in the event the scheme have to meet an inordinately large number of redemption.
- 22. Trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity-related securities.
- 23. The scheme may invest unlisted equity and equity related instruments, which could affect the liquidity of the scheme.
- 24. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The scheme may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with Derivatives

The underlying fund may invest in derivatives traded on recognised stock exchanges overseas for hedging and portfolio balancing purposes. To the extent the underlying fund invests in derivative instruments, the scheme are exposed to the risk associated with derivative instruments, such as:

25. Derivative products are leveraged instruments and can provide disproportionate gains

as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

- 26. Derivatives are high risk, high return instruments. A small price movement in the underlying security could have a large impact on their value and may also result in a loss. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- 27. The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
- 28. Interest rate swaps require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honour its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.

29. Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the AMC has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

30. Risk factors associated with investment in Tri-Party Repo

All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by Clearing Corporation of India (CCIL). This reduces the settlement and counterparty risks considerably.

Mutual funds are member of securities segment and Triparty Repo trade settlement of CCIL. The members are required to contribute an amount from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. Additionally, the fund contribution is allowed to meet the

residual loss in case of default by the other clearing member (the defaulting member). CCIL maintains two separate Default Funds with respect to the Securities Segment. One with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades.

Therefore, mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

C. RISK MITIGATION FACTORS

In so far as investments of the scheme are in underlying fund, there are no specific risk mitigating factors. For the investments of the scheme in debt securities:

- Credit risk or default risk: The Fund will endeavour to minimise Credit/Default risk by primarily investing in medium-high investment grade fixed income securities rated by SEBI registered credit rating agencies. Historical default rates for investment grade securities (BBB and above) have been low.
- Reinvestment Risk: Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
- Liquidity or Marketability Risk: The scheme will endeavour to minimise liquidity risk by investing in securities having a liquid market

Under such circumstances, redemption cheques may be mailed out to investors within a reasonable period of time and will not be subject to the normal response time for redemption cheque mailing.

In case where more than one application is received for redemption in a scheme for an aggregate redemption amount equal to or more than Rs.2 lakhs on any Business Day across all plans/options of the relevant scheme, then such applications shall be aggregated at the investor level (same holders/joint holders identified by their Permanent Account Numbers (PAN) in the same sequence).
