02. INTRODUCTION

A. RISK FACTORS

STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
- Past performance of the sponsors / the asset management company / mutual fund does not indicate or guarantee the future performance of the scheme of the mutual fund.
- There is no assurance or guarantee that the objective of the mutual fund will be achieved.
- Franklin India Fixed Maturity Plans – Series 5 is only the name of the scheme and do not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1 lakh made by it towards setting up the Fund.
- Investors in the Scheme are not being offered any guaranteed / assured returns.
- There is no guarantee or assurance on the frequency or quantum of dividends (which shall be at the discretion of the AMC/Trustee and also depend on the availability of adequate distributable surplus) although there is every intention to declare dividends in Dividend Plan.

SCHEME SPECIFIC RISK FACTORS

1. The performance of the scheme may be affected by the corporate performance, macro-economic factors, changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in the securities markets.
2. Low trading volumes, settlement periods and transfer procedures may restrict the liquidity of the scheme's investments. Transacting may become difficult due to extreme volatility in the market resulting in constriction in volumes. Additionally, changes in the SEBI/ RBI regulations/Guidelines may have an adverse impact on the liquidity of the scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an inordinately large number of redemption requests. In addition, the Trustee at its sole discretion reserves the right to limit or withdraw sale and/or repurchase/redemption and/or switching of the units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely under certain circumstances. For details refer the Section '**Suspension of sale or redemption of units**'. The scheme will retain certain investments in cash or cash equivalent for the day to day liquidity requirements.
3. **Interest rate risk:** This risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the scheme may be subject to fluctuation. Changes in the interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby possible movements in the NAV. This may expose the scheme to possible capital erosion.
4. **Credit risk or default risk:** This refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Default risk / credit risk arises due to an issuer's inability to meet obligations on the principal repayment and interest payments. Because of this risk corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations and free of credit risk. Normally the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.
5. **Market risk:** This risk arises due to price volatility due to such factors as interest sensitivity, market perception or the credit worthiness of the issuer and general market liquidity, change in interest rate expectations and liquidity flows. Market risk is a risk which is inherent to investments in securities. This may expose the scheme to possible capital erosion.
6. **Reinvestment risk:** This risk refers to the interest rate levels at which cash flows received for the securities in the Scheme are reinvested. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon

of the bond, which might result in the proceeds being invested at a lower rate. The additional risk from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

7. **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk today is a characteristic of the Indian fixed income market. E.g. historically, the securitized debt securities segment has witnessed low liquidity. This could lead to higher costs for secondary market trading, if the fund witnesses volatile flows.
8. Risks of investing in floating rate debt instruments or fixed rate debt instruments swapped for floating rate return:
 - a. **Interest rate movement (Basis Risk):** As the fund will invest in floating rate instruments, these instruments' coupon will be reset periodically in line with the benchmark index movement. Normally, the interest rate risk of a floating rate instrument compared to a fixed rate instrument is limited. The changes in the prevailing rates of interest will likely affect the value of the Scheme's holdings until the next reset date and thus the value of the Scheme's Units. Increased rates of interest, which frequently accompany inflation and / or a growing economy, are likely to have a negative effect on the value of the Units. The value of securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The fund could be exposed to the interest rate risk (i) to the extent of time gap in resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture the interest rate movement.
 - b. **Spread Movement (Spread Risk):** Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments.
 - c. **Settlement Risk (Counterparty Risk):** The floating rate assets may also be created by swapping a fixed return to a floating rate return. In such a swap, there may be an additional risk of counterparty who will pay floating rate return and receive fixed rate return.
9. Certain fixed income securities give an issuer the right to call its securities, before their maturity date, in periods of declining interest rates. The possibility of such pre-payment risk may force the fund to re-invest the proceeds of such investments in securities offering lower yields, thereby reducing the fund's interest income.
10. The scheme may invest in non-publicly offered debt securities. This may expose the scheme to liquidity risks.
11. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
12. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme.

Risks associated with Securitised Debts

13. Different types of Securitised Debts in which the scheme would invest carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investments in Securitised Debts. e.g. AAA securitised bonds will have low Credit Risk than a AA securitised bond. Credit Risk on Securitised Bonds may also depend upon the Originator, if the Bonds are issued with Recourse to Originator. A Bond with Recourse will have a lower Credit Risk than a Bond without Recourse. Underlying Assets in Securitised Debt may be the Receivables from Auto Finance, Credit Cards, Home Loans or any such receipts. Credit risk relating to these types of receivables depends upon various factors including macro-economic factors of these industries and economies. To be more specific, factors like nature and adequacy of property mortgaged against these borrowings, loan agreement, mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loan, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower influence the risks relating to the assets (borrowings) underlying the Securitised Debts. Holders of Securitised Assets may have Low Credit Risk with Diversified Retail Base on Underlying Assets, especially when Securitised Assets are created by High Credit Rated Tranches. Risk profiles of Planned Amortisation Class Tranches (*PAC*), Principal Only Class Tranches (*PO*) and Interest Only Class Tranches (*IO*) will also differ, depending upon the interest rate movement and Speed of Pre-payments. A change in market interest rates/prepayments may not change the absolute amount of receivables for the investors, but affects the reinvestment of the periodic cash flows that the investor receives in the securitised paper.
14. Presently, secondary market for securitised papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to

- resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure
15. Securitised transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Seller may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Risks associated with derivatives

16. Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
17. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
18. Interest rate swaps and Forward Rate Agreement require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honor its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.
19. The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
20. The Stock Exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio.

Risk associated with close ended Schemes

- A close ended Scheme endeavors to achieve the desired returns only at the scheduled maturity of the Scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode, if they have opted to hold Units in demat form.
- Although Units of the respective Plan(s) as mentioned in this Scheme Information Document are to be listed on the Exchange(s), there can be no assurance that an active secondary market will develop or be maintained.
- Trading in Units of the respective Plan(s) on the Exchange(s) may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in Units of the respective Plan(s) is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the respective Plan(s) will continue to be met or will remain unchanged.
- Any changes in trading regulations by the Stock Exchange(s) or SEBI may inter-alia result in wider premium/ discount to NAV.
- The Units of the respective Plan(s) may trade above or below their NAV. The NAV of the respective Plan(s) will fluctuate with changes in the market value of Plan's holdings. The trading prices of Units of the respective Plan(s) will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the respective Plan(s).
- The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades,

repurchase of Units by the Mutual Fund on the maturity date / final redemption date will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

Risk Mitigation Factors:

- Interest Rate Risk: The Fund seeks to mitigate this risk by investing in securities maturing on or before the maturity of the Scheme.
- Credit risk or default risk: The Fund will endeavour to minimise Credit/Default risk by primarily investing in medium-high investment grade fixed income securities rated by SEBI registered credit rating agencies. The historical default rates for investment grade securities (BBB and above) have been low.
- Reinvestment Risk: Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
- The scheme may take positions in interest rate derivatives to hedge market/interest rate risks.
- Liquidity or Marketability Risk: The fund will endeavour to minimise liquidity risk by investing in securities having a liquid market.

B. REQUIREMENT OF MINIMUM NUMBER OF INVESTORS

Each Plan under the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Plan(s). These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan(s) shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 Business Days from the date of closure of the New Fund Offer.

The asset allocation pattern described above may alter from time to time on a short-term basis on

defensive considerations, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors (i.e., for reasons other than downgrade in rating) and would, in such cases, shall be rebalanced from date of deviation within the period as specified in the table below:

Tenure of the Plan	Rebalancing period

Further, in case the portfolio is not re-balanced, justification for the same shall be placed before the investment committee and reasons for the same shall be recorded in writing. The investment committee shall then decide on the course of action. However, due to market action, if the values of debt/money market instruments appreciate/ depreciate resulting in deviation of the specified limits mentioned under asset allocation table and intended portfolio allocation respectively, the fund manager may or may not rebalance the portfolio and may run with the ongoing exposure.

However, if the asset allocation pattern is to be altered for other reasons, as this is a fundamental attribute, the procedure outlined in the paragraph on fundamental attributes below, shall be followed.

Intended Portfolio Allocation:

The Plan, Franklin India Fixed Maturity Plans-Series 5 – Plan F (1203 days), being launched under this SID, will invest in securities with floors and ceiling within a range of 5% of the intended allocation against each sub class of asset as indicated below in accordance with SEBI Circular No. Cir/ IMD/ DF/12 / 2011 dated August 1, 2011 as amended from time to time:

- Sectors in which the Scheme shall not invest - The Plan under the Scheme shall not invest in instruments issued by Gems & Jewelry and Airline companies.

There would be no variation between the intended portfolio allocation and the final portfolio, subject to the following:

- Deviation of the asset allocation in favour of higher rated instruments within the same instrument category to improve the portfolio credit quality.
- In case CPs/ NCDs of desired credit quality are not available or the Fund Manager is of the view that the risk reward analysis of such instruments are not in the best interest of the Unit holders, the Plan(s) may invest in highest rated CDs viz. A1+/ CBLOs/ Reverse Repos/ T-Bills.

- iii. At the time of building the portfolio post NFO and towards the maturity of the Plan, the monies may be kept in cash and invested largely in cash equivalents / liquid/ money market schemes / shorter tenor CDs.
- iv. During the tenure of the Plan(s), the above allocation may vary due to instances like (a) coupon inflow; (b) the instrument is called or bought back by the issuer (c) in anticipation of any adverse credit event. In case of such deviations, the Plan(s) may invest in highest rated CDs viz. A1+/ CBLOs/ Reverse Repos / T-Bills. Such deviation may continue till maturity of the Plan(s), if suitable CPs / NCDs of desired credit quality are not available.

ADDITIONAL DISCLOSURES:

Credit evaluation policy of investments in debt securities:

The group follows a disciplined investment process to meet Fund specific investment objectives. It aims to develop a well-diversified portfolio that maintains liquidity and credit risk in line with the objective of the scheme. The group evaluates all the investment proposals to ensure that credit risk is kept at the optimum level. Portfolios are constructed to endeavour to meet the obligations to investors are met on a timely basis.

Credit research is done on a regular basis for companies. It includes internal analysis of financial reports as well as rating rationale and other inputs from external agencies. This also helps to minimise credit migration risk and for generating relative value trade ideas.

Credit analysis of securities is an ongoing process. It is based on a strategic framework for credit analysis, which broadly divides the task into two categories: business risk and financial risk. The prime objective is to evaluate a borrower's ability and willingness to repay the debt on time. In order to assess business risk, the following factors are considered

- Outlook for the economy (domestic & global)
- Outlook for the industry
- Company specific factors

OVERVIEW OF DEBT MARKET

The Indian debt markets are one of the largest markets in Asia. Government and Public Sector enterprises are predominant borrowers in the market. While interest rates were regulated till a few years back, there has been a rapid deregulation and currently both the lending and deposit rates are market determined.

The bond markets are developing fast with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets now. The average trading volume in the market ranges between Rs.50,000 crores to Rs.70,000 crores, of which about 90% comprises of the government securities.

The various debt instruments currently available for investments are:

Instruments	Current Yields*	Liquidity
Central/State Government securities	6.60% to 8.30%	Very high
PSU Bonds/Corporate debentures	7.10% to 13.00%	Medium – High
Commercial Papers/Certificate of deposits	6.90% to 10.50%	High
Call/Notice Money	6.40% to 6.80%	Very high
Repo / CBLO	6.00% to 6.70%	Very high

*Yields as of January 24, 2019

The actual yields will, however, vary in line with general levels of interest rates and debt/money market conditions prevailing from time to time.

INVESTMENTS IN DERIVATIVE INSTRUMENTS

Brief note on investment in derivative instruments

As part of the Fund Management process, the Trustee may permit the use of derivative instruments such as swap agreements, Forward Rate Agreement (FRA) or any other derivative instruments that are permissible or may be permissible in future under applicable regulations and such investments shall be in accordance with the investment objectives of the scheme.

On the fixed income side, an interest rate swap agreement from fixed rate to floating rate is an example of how derivatives can be an effective hedge for the portfolio in a rising interest rate environment.

Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on Stock Exchanges whereas OTC derivative transactions are generally structured between two counterparties.

Derivatives may be high risk - high return instruments, upon leveraging. As they are highly leveraged, a small price movement in the underlying security could have a large impact on their value and may also result in a loss.

Position Limits:

The schemes may enter into derivative transactions in line with the guidelines prescribed by SEBI from time to time. The scheme may take exposure in derivatives up to a maximum of 50% of its AUM. The exposure limit per scrip/instrument shall be to the extent permitted by the SEBI Regulation for the time being in force. These limits will be reviewed by the AMC from time to time.

Currently, the position limits for Mutual Funds and its schemes, as permitted by the SEBI Regulations, are as under:

The cumulative gross exposure through, debt and derivative positions should not exceed 100% of the net assets of the scheme. Exposure due to hedging positions may not be included in the above mentioned limit subject to the following:

- Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
- Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned above.
- Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
- The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned above.

Further, the total exposure related to option premium paid must not exceed 20% of the net assets of the scheme. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

Purpose of investment:

- Trading in derivatives by the scheme shall be restricted to hedging and portfolio balancing purposes.
- The scheme shall fully cover its positions in the derivatives market by holding underlying securities/cash or cash equivalents/option and/or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market.
- Separate records shall be maintained for holding the cash and cash equivalents/securities for this purpose.
- The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all time.

Valuation:

- The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.
- The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.

Interest Rate Swaps:

The Indian markets have faced high volatility in debt and equity markets. An interest rate swap is a contractual agreement between two counter-parties to exchange streams of interest amount on a national principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

➤ **Purpose of Interest Rate Swaps:**

- The Indian markets have faced high volatility in debt and equity markets. An interest rate swap is a contractual agreement between two counter-parties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.
- The scheme shall use derivative position for hedging the portfolio risk on a non-leverage basis. The scheme shall fully cover their positions in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market.

Let us look at an example of an interest rate swap:

Entity A has Rs.20 crores, 3 month asset which is being funded through call. Entity B, on the other hand, has deployed Rs.20 crores in overnight call money market, 3 month liability. Both the entities are taking on an interest rate risk.

To hedge against the interest rate risk, both the entities can enter into a 3 month swap agreement based on say MIBOR (Mumbai Inter Bank Offered Rate). Through this swap, entity B will receive a fixed pre-agreed rate (say 8%) and pay NSE MIBOR (“the benchmark rate”) which will neutralize the interest rate risk of lending in call. Similarly, entity A will neutralize its interest rate risk from call borrowing as it will pay 8% and receive interest at the benchmark rate.

Assuming the swap is for Rs.20 crores 1 September to 1 December, Entity A is a floating rate receiver at the overnight compounded rate and Entity B is a fixed rate receiver. On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On December 1, they will calculate as explained below:

Entity A is entitled to receive daily compounded call rate for 92 days and pay 8% fixed.

Entity B is entitled to receive interest on Rs.20 crores @ 8% i.e. Rs.40.33 lakhs, and pay the compounded benchmark rate.

Thus on December 1, if the total interest on the daily overnight compounded benchmark rate is higher than Rs.40.33 lakhs, entity B will pay entity A the difference and vice versa.

Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Example: Let us assume that a scheme has an investment of Rs.10 crore in an instrument that pays interest linked to NSE Mibor. Since the NSE Mibor would vary daily, the scheme is running interest rate risk on its investment and would stand to lose if rates go down. To hedge itself against this risk, the Scheme could do an IRS where it receives a fixed rate (assume 10%) for the next 5 days on the notional amount of Rs. 10 crore and pay a floating rate (NSE Mibor). In doing this, the scheme would effectively lock itself into a fixed rate of 10% for the next five days. The steps would be:

1. The scheme enters into an IRS on Rs. 10 crore from December 1 to December 6. It receives a fixed rate of interest at 10% and the counter party receives the floating rate (NSE Mibor). The scheme and the counter party exchange a contract of having entered into this IRS.
2. On a daily basis, the NSE Mibor will be tracked by the counterparties to determine the floating rate payable by the scheme.
3. On December 6, the counterparties will calculate the following:
 - The scheme will receive interest on Rs. 10 crore at 10% p.a. for 5 days i.e. Rs.1,36,986/-
 - The scheme will pay the compounded NSE Mibor for 5 days by converting its floating rate asset into a fixed rate through the IRS.
 - If the total interest on the compounded NSE Mibor rate is lower than Rs. 1,36,986/-, the scheme will receive the difference from the counterparty and vice-versa. In case the interest on compounded NSE Mibor is higher, the scheme would make a lower return than what it would have made had it not undertaken IRS.

Risks:

Interest rate swaps and FRA require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the “counter-party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honour its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.

As is clear from the above examples, engaging in derivatives has the potential to help the scheme in minimising the portfolio risk and/or improve the overall portfolio returns.

Please note these examples are hypothetical in nature and are given for illustration purposes only. The actual returns may vary depending on the market conditions.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

INVESTMENT IN SECURITISED DEBT**1. How the risk profile of securitized debt fits into the risk appetite of the scheme**

Securitization is the fact or process of securitizing assets i.e. the conversion of loans into securities, usually in order to sell them on to other investors. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However it differs mainly in two respects. One, the liquidity of securitized debt is less than similar debt securities. Two, for certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. After considering these additional risks, the investment is no different from investment in a normal debt security. Considering the investment objective of the scheme, these instruments with medium risk profile can be considered in the investment universe. Thus if the Fund Manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

Investments in securitized debt will be done based on the assessment of the originator and the securitized debt which is carried out by the Fixed Income team based on the in-house research capabilities as well as the inputs from the independent credit rating agencies and by following Franklin Templeton’s internal credit process.

Specifically, in order to mitigate the risk at the issuer/originator level the Fixed Income team will consider various factors which will include -

- Track record of the originator in the specific business to which the underlying loans correspond to;
- size and reach of the issuer/originator;
- Collection infrastructure & collection policies;
- Post default recovery mechanism & infrastructure;
- Underwriting standards & policies followed by originator;
- Management information systems;
- Financials of the originators including an analysis of leverage, NPAs, earnings, etc.;
- Future strategy of the company for the specific business to which the underlying loans correspond to;
- Performance track record of Originator’s portfolio & securitized pools, if any;
- Utilization of credit enhancement in the prior securitized pools;
- The quality of information disseminated by the issuer/ originator; and
- The credit enhancement for different types of issuer/originator.

Also, assessment of business risk would be carried out which includes -

- Outlook for the economy (both domestic and global); and
- Outlook for the industry

In addition, the fund analyses the specific pool and the broad evaluation parameters are as follows:

- Average seasoning of the loans in the pool
- Average Loan to value ratio of the loans in the pool
- Average ticket size of the loans
- Borrower profile (salaried / self employed, etc)
- Geographical profile of the pool
- Tenure profile of the pool
- Obligor concentration
- Credit enhancement cover available over and above the historic losses on Originator's portfolio
- Expected Prepayment rate in the specific asset class experienced by the originator in the past as well as the industry
- Limited Liquidity and Price Risk.

The scheme will invest in securitized debt which are rated investment grade and above by a credit rating agency recognized by SEBI. The investment team analyses the Rating Rationale in detail before investing in any PTCs, and also discusses with the concerned rating agency on a need basis. The rating agency would normally take in to consideration the following factors while rating a securitized debt:

- Credit risk at the asset/originator/portfolio/pool level
 - The quality of the pool is a crucial element in assessing credit risk. In the Indian context, generally, pools are 'cherry-picked' using positive selection criteria. To protect the investor from adverse selection of pool contracts, the rating agencies normally take into consideration pool characteristics such as pool seasoning (seasoning represents the number of instalments paid by borrower till date: higher seasoning represents better quality), over dues at the time of selection and Loan to Value (LTV). To assess its risk profile vis-à-vis the overall portfolio, the pool is analysed with regard to geographical location, borrower profile, LTV, and tenure.
- Counterparty risk
 - This includes Servicer Risk, co-mingling risk etc. The rating agencies generally mitigate such risks though the usage of stringent counterparty selection and replacement criteria to reduce the risk of failure.
- Bankruptcy risk
 - Of the Originator –
 - Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'. It is also in the Interest of the originator to demonstrate the transaction as a true sell to get the necessary revenue recognition and tax benefits.
 - Of the Investors' agent
 - All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent.
- Legal risks
 - The rating agency normally conducts a detailed study of the legal documents to ensure that the investors' interest is not compromised and relevant protection and safeguards are built into the transaction.
 - Various market risks like interest rate risk, macro-economic risks
 - Assessment of risks related to business for example outlook for the economy, outlook for the industry and factors specific to the issuer/originator.

3. Risk mitigation strategies for investments with each kind of originator

The examples of securitized assets which may be considered for investment by the Scheme and the various risk mitigation parameters (please read in continuation with point 2 above) which will be considered include;

A) Asset backed securities issued by banks or non-banking finance companies.

Underlying assets may include receivables from loans against cars, commercial vehicles, construction equipment or unsecured loans such as personal loans, consumer durable loans. The various factors which will be usually considered while making investments in such type of securities include profile of the issuer, analysis of underlying loan portfolio – nature of asset class, seasoning of loans, geographical distribution of loans and coverage provided by credit-cum-liquidity enhancements.

B) Mortgage backed securities issued by banks or housing finance companies, where underlying assets are comprised of mortgages/home loan.

The various factors which will be usually considered while making investments in such type of securities include issuer profile of the issuer, quality of underlying portfolio, seasoning of loans, coverage provided by credit-cum-liquidity enhancements and prepayment risks.

C) Single loan securitization, where the underlying asset comprises of loans issued by a bank/non-banking finance company.

The factors which will be usually considered while making investments in such type of securities include assessment of credit risk associated with the underlying borrower as well as the originator. The Fixed Income team will adhere to the Franklin Templeton's internal credit process and perform a detailed review of the underlying borrower prior to making investments. This analysis is no different from the analysis undertaken by Fund when it invests in Debentures or Commercial papers issued by the same borrower.

Critical Evaluation Criteria

Typically the Fund would avoid investing in securitization transaction (without specific risk mitigation strategies / additional cash/security collaterals/ guarantees) if there are concerns on the following issues regarding the originator / underlying issuer:

1. High default track record/ frequent alteration of redemption conditions/covenants
2. High leverage ratios – both on a standalone basis as well on a consolidated level/ group level
3. Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
4. Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
5. Poor reputation in market
6. Insufficient track record of servicing of the pool or the loan, as the case may be.

Further, investments in securitized debt will be done in accordance with the investment restrictions specified under the SEBI Regulations/ this Scheme Information Document which would help in mitigating certain risks. Currently, as per the Regulations, the Scheme cannot invest more than 10% of its net assets in debt instruments (irrespective of residual maturity) issued by a single issuer which are rated not below investment grade by a credit rating agency authorized to carry out such activity under the Act. Such investment limit may be extended to 12% of the net assets of the Scheme with the prior approval of the Board of Trustees and the Board of the AMC.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

The framework which will generally be applied by the Fund Manager while evaluating the investment decision with respect to securitized debt will be as follows:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell down \$	Others

\$ Broad evaluation criteria as per point 3 above

Notes:

1. Retail pools are the loan pools relating to Car, 2 wheeler, micro finance and personal loans, wherein the average loan size is relatively small and spread over large number of borrowers.
2. The information illustrated in the table above is based on current scenario relating to securitized debt market and is subject to change depending upon the change in the related factors.

In addition to the framework stated in the table above, in order to mitigate the risks associated with the underlying assets where the diversification is less, at the time of investment the Fixed Income team could consider various factors including but not limited to -

- Size of the loan - the size of each loan is generally analysed on a sample basis and an analysis of the static pool of the originator is undertaken to ensure that the same matches with the static pool characteristics. It also indicates whether there is high reliance on very small ticket size borrower which could result in delayed and expensive recoveries.
- Average original maturity of the pool of underlying assets
- The analysis of average maturity of the pool is undertaken to evaluate whether the tenor of the loans are generally in line with the average loans in the respective industry and repayment capacity of the borrower.
- Loan to value ratio, average seasoning of the pool of underlying assets - these parameters would be evaluated based on the asset class as mentioned in the table above.
- Default rate distribution - the Fixed Income team generally ensures that all the contracts in the pool are current to ensure zero default rate distribution.
- Geographical distribution - the analysis of geographical distribution of the pool is undertaken to ensure prevention of concentration risk.
- Credit enhancement facility - credit enhancement facilities in the form of cash collateral, such as fixed deposits, bank guarantee etc could be obtained as a risk mitigation measure.
- Liquidity facility - these parameters will be evaluated based on the asset class as mentioned in the table above.
- Structure of the pool of underlying assets - The structure of the pool of underlying assets would be either single asset class or combination of various asset classes as mentioned in the table above. We could add new asset class depending upon the securitization structure and changes in market acceptability of asset classes.

5. Minimum retention period of the debt by originator prior to securitization

The minimum retention period of the debt by the originator prior to securitization and the minimum retention percentage by originator of debts will be as per the guidelines/regulations issued by the RBI/other regulatory agencies from time to time. Also, please refer the table in point 4. The Fund will adopt that policy, whichever is stricter.

6. Minimum retention percentage by originator of debts to be securitized

Same as point 5 above.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

An investment by the scheme in any security is done after detailed analysis by the Fixed Income team and in accordance with the investment objectives and the asset allocation pattern of a scheme. All investments are made on an arm's length basis without consideration of any investments (existing/potential) in the schemes made by any party related/involved in the transaction. The robust credit process ensures that there is no conflict of interests when a scheme invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme.

8. The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The resources for and mechanisms of individual risk assessment with the AMC for monitoring investment in securitized debt are as follows:

- Fixed Income Team – Currently, the AMC has a 7 member team, which is responsible for credit research and monitoring and fund management, for all exposures including securitized debt.
- Ratings are monitored for any movement – Based on the cash flow report and Fixed Income Team's view, periodic review of utilization of credit enhancement shall be conducted and ratings shall be monitored accordingly.
- For legal and technical assistance with regard to the documentation of securitized debt instruments, the team can make use of resources within the internal legal team and if required take help of our external legal counsel as well.

As per the prevailing SEBI guidelines, the investments in securitised debt instruments will be shown as a separate category under debt instruments in the half yearly disclosure of scheme portfolio.

E. INVESTMENT STRATEGY

The principle strategy is to create a diversified basket of fixed income securities that are held to maturity. The maturities of the securities are intended to match the tenure of the scheme. The portfolio will be constructed with a focus on security level analysis.

For this purpose, the investors need to furnish the details of their depository account in the Application Form along with a copy of the Client Master Report / List (CMR/CML) or the Transaction Statement (the page reflecting name and holding pattern) for verification of the demat account. The Units allotted in electronic form will be credited to the investor's Beneficiary Account with a Depository Participant (DP) of CDSL or NSDL as per the details furnished by the investor in the Application Form. In case the Unitholder does not wish to get his/her Units converted / allotted in electronic form or the AMC is not able to credit the Units to the beneficiary account(s) of the investor for any reason whatsoever, the

AMC shall issue Account statement(s) specifying the Units allotted to the investor. Please note that where the investor has furnished the details of their depository accounts in the Application Form, it will be assumed that the investor has opted for allotment in demat form and the allotment will be made only in demat form as default.

However, this facility is not available for investment under Switch facility.

The existing Unitholders can dematerialise the units held in physical form (represented by Account Statement) at any time by making an application to the Depository Participant by filling up the Conversion Request Form (CRF) and surrendering the Account Statement(s).

LISTING

Being a closed - end scheme, as per SEBI guidelines, the Units of the Scheme will be listed on one or more recognised stock exchange(s) within 5 Business Days from the Date of Allotment.

It is proposed to list the Units on National Stock Exchange of India Ltd. (NSE). The AMC has received in-principle approval from NSE for listing of Units, vide letter ref. NSE/LIST/59912 dated September 07, 2018.

The Mutual Fund may at its sole discretion list the Units under the respective Plan(s) on any other recognized Stock Exchange(s) at a later date.

The AMC/Trustee reserves the right to delist the units of the Plan(s) under the Scheme from a particular stock exchange provided the units are listed on atleast one stock exchange.

Trading and Settlement:

Buying or selling of Units by investors can be made from the secondary market on the stock exchange in dematerialised form only. Units can be bought or sold on the stock exchange on all the trading days at market prices, which may be at a premium/discount to the NAV of the Scheme depending upon the demand and supply of Units at the stock exchange. The minimum number of Units that can be bought or sold on the stock exchange will be 1 (one) unit. The trading will be as per the normal settlement cycle.

Since the trading of Units on the stock exchange is permitted only in electronic (demat) form, an investor who purchases or sells the Units on the stock exchange will be required to have a beneficiary account with a Depository Participant of NSDL/CDSL.

Rolling Settlement

The Fund intends to follow the same settlement pattern and practices of the stock exchange. The Pay-in and Pay-out of funds and the Units will take place within 2 working days after the trading date. The pay-in and pay-out days for funds and securities are prescribed as per the settlement cycle.

MANDATORY INFORMATION

As per the directives issued by SEBI, it is mandatory for applicants to mention their bank account numbers in their applications and therefore, investors are requested to fill-up the appropriate box in the application form failing which applications are liable to be rejected.

It is mandatory for all investors (including joint holders, NRIs, POA holders and guardians in the case of minors) to furnish such documents and information as may be required to comply with the Know Your Customers (KYC) policies under the AML Laws. Applications without such documents and information may be rejected.

In terms of SEBI circulars dated April 27, 2007, April 03, 2008 and June 30, 2008 read with SEBI letter dated June 25, 2007, **Permanent Account Number (PAN) would be the sole identification number for all participants transacting in the securities market, irrespective of the amount of transaction**, except (a) investors residing in the state of Sikkim; (b) Central Government, State Government, and the officials appointed by the courts e.g. Official liquidator, Court receiver etc. (under the category of Government) and (c) investors participating only in micro-pension. SEBI, in its subsequent letter dated July 24, 2012 has conveyed that investments in mutual fund schemes [including investments through Systematic Investment Plan (SIP)] of up to Rs.50,000/- per year per investor shall be exempted from the

requirement of PAN.

Accordingly, where the aggregate of lump sum investment (fresh purchase and additional purchase) and SIP instalments by an investor in a financial year i.e., April to March does not exceed Rs.50,000/- (referred to as "Micro investment"), it shall be exempt from the requirement of PAN. However, a duly verified/attested copy of such document(s) as may be prescribed by the AMC/Trustee from time to time, needs to be submitted as the proof of identification in lieu of PAN Card copy.

This exemption will be available only to Micro investment made by individuals being Indian citizens (including NRIs, joint holders, minors acting through guardian and sole proprietary firms). PIOs, HUFs, QFIs and other categories of investors will not be eligible for this exemption.

For the purpose of identifying Micro investment, applications shall be aggregated at the investor level (same sole holder/joint holders in the same sequence) and such aggregation shall be done irrespective of the number of folios / accounts under which the investor is investing and irrespective of source of funds, mode, location and time of application and payment.

Thus, submission of PAN is mandatory for all existing as well as prospective investors (including all joint applicants/holders, guardians in case of minors, POA holders and NRIs but except for the categories mentioned above) for investing with mutual funds from this date. Investors are required to register their PAN with the Mutual Fund by providing the PAN card copy. E-PAN issued by CBDT can also be provided by FPI.

All investments in Franklin Templeton Mutual Fund need to comply with the PAN and KYC requirements as stated above, failing which the applications are liable to be rejected. It is clarified that all categories of investors seeking exemption from PAN still need to complete the KYC requirements stipulated by the AMC/Trustee from time to time, irrespective the amount of investment.

Non acceptance of Third party Payment

The Mutual Fund/AMC shall not accept subscriptions with Third Party payment instruments in the schemes, except in following cases:

- (a) Payment by Parents/Grand-Parents/related persons on behalf of a minor in consideration of natural love and affection or as gift for a value not exceeding Rs.50,000/- (each regular purchase);
- (b) In case of investment in the name of a minor, payment by the person registered as Guardian in the minor's Folio irrespective the amount of investment;
- (c) Payment by Employer on behalf of employee for lump sum/one-time subscription or deductions out of expense reimbursement;
- (d) Payment by Employer towards subscription in the name of employees as bonus/incentive paid in form of mutual fund units; and
- (e) Custodian on behalf of a client;
- (f) Payment by Asset Management Company to a Distributor empanelled with it on account of commission/incentive etc. in the form of the Mutual Fund Units of the Funds managed by such AMC through Systematic Investment Plans or lump sum / one-time subscription, subject to compliance with SEBI Regulations and Guidelines issued by AMFI, from time to time;
- (g) Payment by Corporate to its Agent/ Distributor/ Dealer (similar arrangement with Principal-agent relationship), on account of commission/ incentive payable for sale of its goods/services in form of mutual fund units through lump sum/ one-time subscription.

For this purpose (i) Third Party payment shall mean payment made through instruments issued from an account other than that of the beneficiary investor. It is clarified that in case of payments from a joint bank account, the first holder of the mutual fund folio has to be one of the joint holders of the bank account from which payment is made; and (ii) 'related persons' shall mean such persons as may be specified by the AMC from time to time.

The investors making an application under the exception cases mentioned above need to submit such declarations and other documents / information as may be prescribed by the AMC from time to time, without which applications for subscriptions for units will be rejected / not processed / refunded.

KYC is mandatory for all investors (guardian in case of minor) and the person making the payment i.e. third party.

The AMC may specify such procedures for registration of one or more bank accounts of the investor for their mutual fund folio/accounts and its verification, as may be deemed appropriate from time to time.

Investors so desiring to switch may submit a switch request indicating therein the details of the scheme from which switch is to be made (Source Scheme) and the scheme to which the switch is to be made (Destination Scheme). Applications for switch as above should specify the amount / Units to be switched from out of the Units held in any of the existing Schemes of the Fund. The switch request will be subject to the minimum application size and other terms and conditions of the Source Scheme as well as the Destination Scheme. Switch requests will be honoured to the extent permitted by the credit balance (free from any lock-in, lien or encumbrance) in the Unitholder's account. The number of Units so switched will be subtracted from the Unitholder's account and a statement to this effect will be issued to the Unitholder. In the case where a rupee amount is specified or deemed to be specified for switch, Franklin Templeton will redeem that many units as would give the net switch amount requested for, after deducting securities transaction tax and exit load as applicable from time to time.

For effecting the switch / exchange, the units of source scheme/plan will be redeemed at the applicable NAV (subject to applicable load) and the net proceeds shall be invested in the destination scheme/plan at the applicable NAV. The applicable NAV will depend upon the date and time at which the switch request is accepted as evidenced by the electronic date / time stamp affixed at any ISC or Collection Centre and will be subject to the cut-off time and other terms of the respective schemes.

All the switches / exchanges will be treated as redemption in the source scheme and subscription in the destination scheme, with the applicable load structure. The switches of Units will be considered on First-in-First-Out (FIFO) basis.

The investors may please note the exchanges / switches in the schemes shall be subject to the terms and conditions of the respective schemes, including applicable lock-in-periods.

In the event of book closure in any of the schemes, the relevant exchange will be effected on the working day immediately following the end of the book closure period.

(i) Switching from any schemes of the Mutual Fund to FIFMP-5

The facility to switch from any Franklin Templeton Mutual Fund scheme into FIFMP-5 is available only during the NFO of FIFMP-5. Investors who hold Units in any open-end schemes launched of the Mutual Fund and also investors who hold Units in any closed-end scheme launched, may switch all or part of their holdings (free from any lock-in, lien or encumbrance) into FIFMP-5 during the NFO. The switch from any closed-end fund will be subject to applicable repurchase and/or maturity date of the respective Scheme(s) or Plan(s) and will be permitted only on such dates. The Applicable NAV for switching out of the existing open-end funds will be the NAV of the Business Day on which the switch request, complete in all respects, is accepted by the AMC, subject to the cut-off time and other terms specified in the Scheme Information Documents of the respective existing open-end schemes during the NFO. Similarly the applicable NAV for switching out of the existing close-end funds will be the applicable NAV (after considering applicable loads) on the specified repurchase date for such Plan(s), subject to the switch request, complete in all respects, being accepted by the AMC, and subject to the availability of repurchase facility and other terms specified in the Scheme Information Document of the respective existing closed-end Schemes.

For any application of switch-in from any open-end Franklin Templeton Scheme into FIFMP-5, received on any date during the NFO, the application will be deemed to have been received on the last date of the NFO and will be processed accordingly. However, in case the last date of the NFO is a non-Business Day for the Source Scheme, the application will be deemed to have been received on the last Business Day for the Source scheme immediately preceding the last date of the NFO and will be processed accordingly. In case the Source Scheme is a closed-end scheme or an interval scheme that offers limited redemption facility, which is available only during the stipulated redemption periods, the switch application will be deemed to have been received on the last day of the relevant redemption window (or on the last day of the NFO if the relevant redemption window closes after the NFO closure) and processed accordingly.

Since the application money for subscription to the Units of FIFMP-5 should be in multiples of Rs.10/- only, the amount switched from any Franklin Templeton scheme to FIFMP-5 (irrespective of whether the switch request specifies a certain Rupee amount or number of Units – including All Units) will be restricted to an amount which is a multiple of Rs.10/- and the balance amount would, at the discretion of the AMC, be retained in the source scheme or paid to the investor.

Upon maturity, the Units outstanding will be automatically redeemed at the NAV of the Date of Maturity and proceeds will be paid to the Unitholder, without any further reference from the Unitholder.

In case the Units are held in physical form, the Unitholders need not surrender the Account Statement / Unit Certificate(s) for redemption on maturity. The Account Statement / Unit Certificates shall automatically stand cancelled on the maturity date and the redemption amount shall be paid to the Unitholders. For the units held in electronic form, the units will be extinguished with the depository and the redemption amount will be paid on the maturity date, at the prevailing NAV on that date. The maturity amount will be paid to the Unitholders whose names appear on the Register of Unitholders on the respective maturity dates, at the prevailing NAV on that date.

However, in case of the Units on which any lien or encumbrance is marked and such lien or encumbrance is subsisting on the Date of Maturity, the Unitholder will be required to procure a release of their lien / encumbrance pending which, the maturity proceeds will not be paid. The Unitholder shall not be entitled for any interest or compensation for any delayed or non-payment of the maturity proceeds till such time the Unitholder provides proof of the release of the lien / encumbrance to the satisfaction of the AMC/Mutual Fund.
